# Uninstall Grafana

## 1. Stop the Grafana service:

*If Grafana is running as a service, stop it first.*

```
sudo systemctl stop grafana-server
```

## 2. Uninstall Grafana:

```
sudo apt-get remove --purge Grafana -y
```

## 3. Delete all data associated with Grafana:

*By default, Grafana stores its data in /var/lib/grafana. To ensure all data is removed, delete this directory:*

```
sudo rm -rf /var/lib/Grafana
```

## 4. Remove the Grafana repository file

*First, let's remove the repository file that could be causing issues. It's likely located in /etc/apt/sources.list.d/grafana.list. To remove it:*

```
sudo rm -f /etc/apt/sources.list.d/grafana.list
```

## 5. Remove the Grafana GPG key

*To ensure that the old key isn't causing conflicts, we should also remove the GPG key you added previously:*

```
sudo rm -f /usr/share/keyrings/grafana-archive-keyring.gpg
```

## 6. Remove any Grafana package installations

*If you have already installed Grafana, you can remove it using the following command:*

```
sudo apt-get purge Grafana
```

## 7. Remove Grafana configuration files (optional):

*If you want to delete configuration files (e.g., if you want to remove any custom settings or change the configuration in the future), Run the following directories:*

```
sudo rm -rf /etc/grafana
```

```
sudo rm -rf /var/log/grafana
```

## 8. Remove Grafana user and group (optional):

*Grafana typically runs under a user called grafana. If you want to remove the user and group, run:*

```
sudo deluser grafana
```

```
sudo delgroup grafana
```

## 9. Remove dependencies (optional):

*If you installed Grafana via a package manager, you can also remove unused dependencies with:*

```
sudo apt-get autoremove -y
```

*After these steps, Grafana should be fully uninstalled along with all its data. Let me know if you need further clarification!*
